

Our Environmental Commitment

# SUSTAINABILITY AT THE HEART OF ALIDECK

Eco-Friendly Solutions for a  
Greener Built Environment

At AliDeck, sustainability is integral to our operations. We take a circular approach to design and production, ensuring minimal environmental impact while delivering high-quality solutions.

## UKCA/CE COMPLIANCE: QUALITY & TRACEABILITY

Our UKCA and CE marking ensure that all AliDeck products meet rigorous safety and environmental standards, providing customers with complete traceability and peace of mind.

## PROUDLY MADE IN BRITAIN

All our products are manufactured in the UK using locally sourced materials. This reduces transportation emissions and supports local industries, while ensuring strict quality and environmental control throughout our supply chain.

## 100% RECYCLABLE & SUSTAINABLE MATERIALS

Every AliDeck product is 100% recyclable, with 67% of materials currently sourced from recycled products. We are constantly working towards increasing this figure to reduce waste and enhance our sustainable practices.

## ECO-FRIENDLY POWDER COATING

Our in-house powder coating process is highly efficient, recycling excess powder to reduce waste. This approach minimises emissions and ensures consistent quality with reduced environmental impact.

## EFFICIENT TRANSPORTATION

We optimise delivery routes and logistics to cut down on transport-related emissions, helping reduce our overall carbon footprint.

## CARBON FOOTPRINT

The manufacturing of construction materials is reportedly responsible for 11% of all global greenhouse gas emissions.

In addition to our recycled materials and local manufacturing, AliDeck focuses on reducing our carbon footprint by optimising an energy-efficient production processes, minimising waste through precision engineering, and continually investing in sustainable product innovation to extend product lifespan and reduce environmental impact.

We also have some exciting plans in the works to further reduce our emissions even further!

# ENGINEERING A GREENER FUTURE

We are committed to innovative engineering solutions that reduce waste, promote recyclability, and set new industry benchmarks for sustainability.

## CUSTOM EXTRUSIONS FOR MINIMAL WASTE

Our custom extrusion process enables precision production, reducing material waste and improving efficiency.

## DESIGNING OUT WASTE

Our design philosophy focuses on reducing unnecessary material usage, ensuring optimal performance with minimal environmental impact.

## INCREASING RECYCLED CONTENT

We currently use 67% recycled materials and are actively working towards 100%. This ongoing effort is part of our commitment to sustainable production.

## DURABLE, LONG-LASTING PRODUCTS

Our products are engineered for long lifespans, reducing the need for frequent replacements and minimising their overall environmental footprint.

## INNOVATING FOR A SUSTAINABLE INDUSTRY

We continuously invest in R&D to improve our processes and reduce our environmental impact, setting new standards for sustainability within our sector.
